US-PAT-NO: 6528863

DOCUMENT-IDENTIFIER: US 6528863 B1

TITLE: Perovskite-containing composite material,  
method of manufacturing said material, electronic  
component and module

----- KWIC -----

Application Filing Date - AD (1):  
19950322

Brief Summary Text - BSTX (9):

With regard to this, a method of manufacturing a thin film from a ferroelectric perovskite material is described, for example, in U.S. Pat. No. 5,198,269, the contents of which are hereby incorporated by reference; said method comprising the following steps: a . providing a first substrate, b. selecting a first sol-gel-perovskite precursor material, the crystallization of this first sol-gel-perovskite precursor material to the perovskite phase being insensitive to the first substrate and, after the heat treatment, the material being isostructural relative to the second ferroelectric, perovskite thin-film material, c. depositing a first layer of the selected sol-gel-perovskite precursor material, d. subjecting said first layer to a thermal treatment to form a first ferroelectric, perovskite thin-film material, e. selecting a second sol-gel-perovskite precursor material, the crystallization of this second sol-gel-perovskite precursor material to the perovskite phase being sensitive to the substrate, f. depositing a second layer of the selected sol-gel-perovskite starting material, g. subjecting said second layer to a thermal treatment to form a second ferroelectric, perovskite thin-film material, the second layer of the second sol-gel-perovskite precursor

material,  
after heat treatment, having better perovskite crystallinity when  
deposited on  
the first layer than if it would have been deposited directly on the  
substrate  
and heat treated.

US-PAT-NO: 6787412

DOCUMENT-IDENTIFIER: US 6787412 B2

TITLE: Dielectric element and method for fabricating  
the same

----- KWIC -----

Detailed Description Text - DETX (122):

The series of steps from the application process to the second  
heat  
treatment were repeated four times, thereby forming a Bi-based  
ferroelectric  
thin film 8 having a thickness of 200 nm (FIG. 7).
